TG83: The Australian Construction e-Business Review

ISBN: 978-0-6480003-0-3

Introduction

The CIB Task Group, TG83 - e-Business in Construction, jointly published this report on the state of e-business usage in the Australian construction industry with the Australian Institute of Building. The report publishes the results of a Australia wide survey of construction organisations analysing the use of e-business related technologies. TG83 defines e-Business in Construction as ICT (Information Communication Technologies) led innovation in construction related processes and the adoption and use of ICT by construction organisations. This broad definition includes all ICT related applications in the construction industry.

This report is a part of a series of country specific e-business in construction reports identifying use of e-business in construction in the respective country. The Australian survey identifies the state of adoption of ICT within the UK construction industry while identifying new developments and trends in e-business in construction.
